DeForest Sees Bi-astral Radio Stopping Squeaks

Inspector Lee DeForest, who first predicted radio success, forecasts new developments, which will eliminate faulty reproduction of high notes.

Lee DeForest, the inventor of the vacuum tube, has predicted that the future of radio lies in the development of bi-astral tubes. These tubes will eliminate the "squeaks" and other faults that have plagued radio reproduction of high notes.

DeForest's bi-astral tubes will allow for a more accurate reproduction of the human voice and other sounds. This will greatly improve the quality of radio broadcasts.

-o- The New Book -o-

BY FRANCES JENNINGS

ONE of the truly original novelists of the present day, John Galsworthy, has just published a new book, "Black April," which is a study of the life of a man who has been a failure in every way, except in the way of his mind. The story is set in the early days of the century, and follows the life of a man who has been a failure in every way, except in the way of his mind. The story is set in the early days of the century, and follows the life of a man who has been a failure in every way, except in the way of his mind.
